DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 29, 2003 has been entered.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
- The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 13 is indefinite since the phrase "comprising a channel for receiving said lower rail, the other of said side surfaces comprising a channel for..." is deemed to constitute a double inclusion of the previously defined "a pair of adjacent channels" limitation [claim 11] from which claim 13 depends. Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-4, 6-9 & 11-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Kordes [U.S. Patent No. 4,134,626]. As to claims 1-4, Kordes (figures 1-7) teaches of a refrigeration appliance cabinet comprising: a bottom mullion (30 e.g.) comprising a pair of adjacent channels (depicted in fig. 4) and an engagement portion (36 for example) proximate a base portion (any portion of a channel) of an adjacent one of the pair of channels, the bottom of the engagement portion and the top portion of the lower channels bottom element (fig. 5) forming a retaining tongue; and a casing (12) comprising an engagement surface (top surface of 18 – fig. 5) for being received in the tongue. The cabinet further comprising a bottom rail (24 of 22) that is received in one of the channels of the mullion. The cabinet further including at least one inner liner (24) and a foam insulation (28) between the liner and casing, the liner being received in one of the channels of the mullion. As to claims 6-9, Kordes teaches of a mullion (30) with channels as disclosed above, an engagement portion (inner curved surface of the bottom channel portion as depicted in fig. 4); and a casing (12) having an outer surface with a fastening projection / tongue (36) extending from the outer surface. The engagement portion comprising an engagement surface with the projection / tongue engaging the surface (note fig. 5) and can be separated from the engagement surface. As to claims 11-14, Kordes teaches of a casing, liner and mullion as disclosed above [claims 1-4], and further comprises a lower rail (36 e.g.), which is configured to be received in the mullion. The mullion's channels each receive one of the liner and lower rail. Kordes further teaches of a bottom panel (36) [it is noted that claims 12 & 14 both depend from claim 11] comprising a tongue (right end portion) for secure coupling to the mullion (fig. 5).

Allowable Subject Matter

6. Claims 5, 10 & 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Avendano et al., and Anderson et al., describe refrigerator cabinet channel structures.
